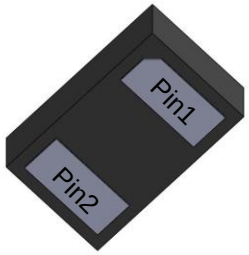
ESDA25P35-1U1M

High power transient voltage suppressor

Datasheet - production data



1610 package

Features

- Low clamping voltage
- Typical peak pulse power: 1400 W (8/20 µs)
- Stand-off voltage 22 V
- Unidirectional diode
- Low leakage current: 0.2 µA at 25 °C
- Complies with IEC 61000-4-2 level 4
  - ±30 kV (air discharge)
  - ±30 kV (contact discharge)

Applications

Where transient overvoltage protection in ESD sensitive equipment is required, such as:

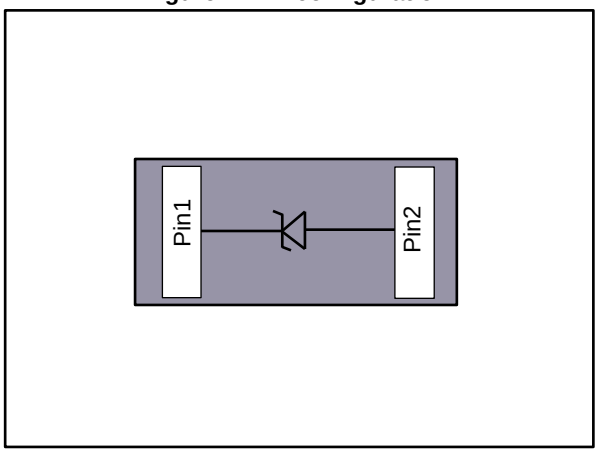
- Smartphones, mobile phones, tablets, portable multimedia
- USB V_{BUS} protection
- Power supply protection
- Battery protection

Description

The ESDA25P35-1U1M is an unidirectional single line TVS diode designed to protect the power line against EOS and ESD transients.

The device is ideal for applications where high power TVS and board space saving are required.

Figure 1: Pin configuration



1 Characteristics

Table 1: Absolute maximum ratings (T_{amb} = 25 °C)

Symbol	Parameter		Value	Unit
V_{PP}	Peak pulse voltage	IEC 61000-4-2: Contact discharge Air discharge	 >30 >30	kV
P_{PP}	Peak pulse power	8/20µs	1400	W
I_{PP}	Peak pulse current	8/20µs	35	A
T_{stg}	Storage junction temperature range		-55 to +150	°C
T_j	Maximum operating junction temperature		-55 to +150	

Figure 2: Electrical characteristics (definitions)

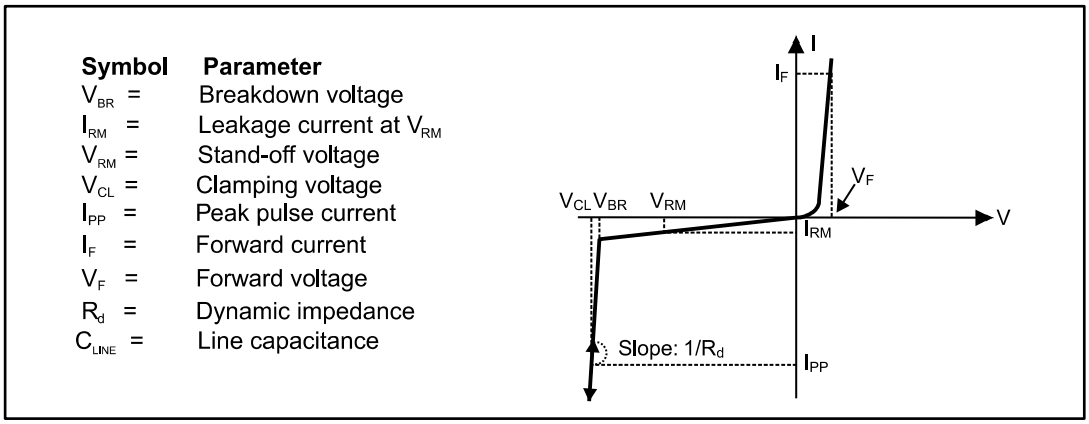


Table 2: Electrical characteristics (T_{amb} = 25 °C)

Symbol	Test condition	Min.	Typ.	Max.	Unit
V_{BR}	I_R = 1 mA	23.3	24.6	25.8	V
V_{RM}				22	
I_{RM}	V_{RM} = 22 V			200	nA
R_d	8/20 µs		0.45		Ω
V_{CL}	I_{PP} = 35 A; 8/20 µs		39	41	V
	I_{PP} = 10 A; 8/20 µs		29	31	
V_F	I_F = 10 mA		0.75		V

2 Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK® packages, depending on their level of environmental compliance. ECOPACK® specifications, grade definitions and product status are available at: ***www.st.com***. ECOPACK® is an ST trademark.

Figure 10: Footprint recommendations

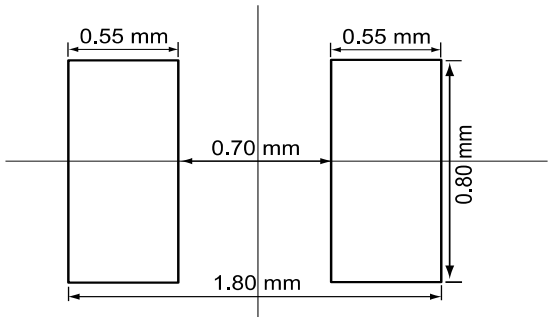

Figure 11: Alternative footprint dimensions

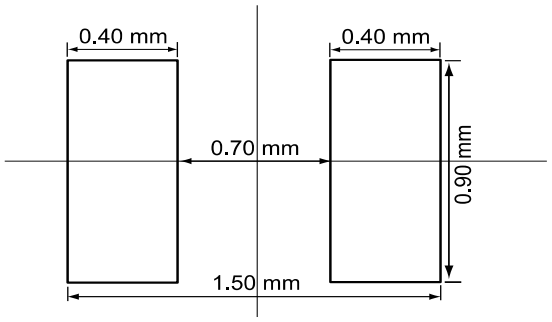

Figure 12: Marking

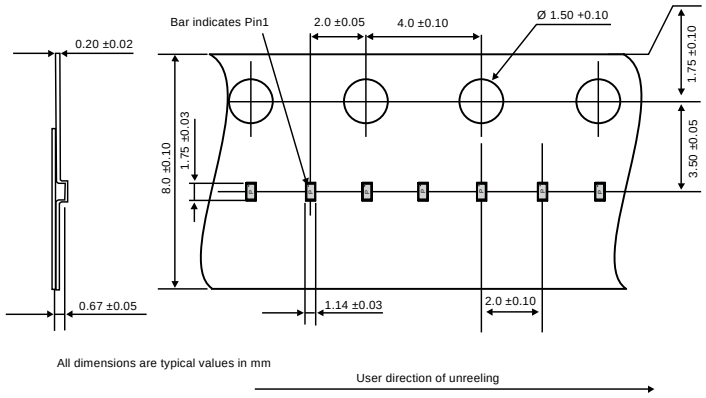
Product marking may be rotated by multiples of 90° for assembly plant differentiation. In no case should this product marking be used to orient the component for its placement on a PCB. Only pin 1 mark is to be used for this purpose.

Figure 13: Tape and reel specification



3 Recommendation on PCB assembly

3.1 Stencil opening design

1. General recommendation on stencil opening design
   a. Stencil opening dimensions: L (Length), W (Width), T (Thickness).
2. General design rule
   a. Stencil thickness (T) = 75 ~ 125 µm
   b. Aspect ratio = $\frac{W}{T} \geq 1.5$
   c. Aspect area = $\frac{L \times W}{2T(L+W)} \geq 0.66$
3. Reference design
   a. Stencil opening thickness: 100 µm
   b. Stencil opening for leads: Opening to footprint ratio is 90%.

Figure 14: Stencil opening dimensions

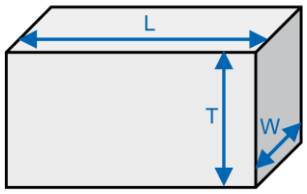


Figure 15: Recommended stencil window position

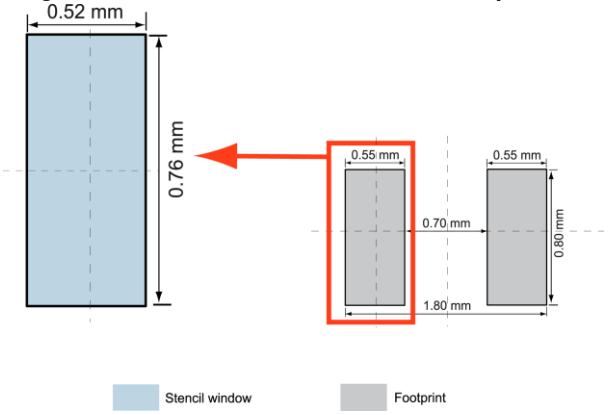

Figure 16: Alternative stencil window position

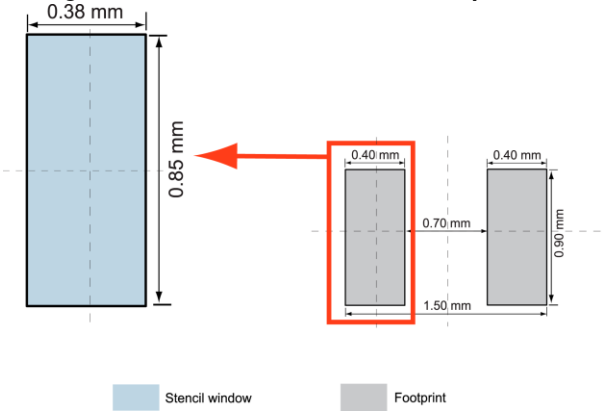


3.2 Solder paste

1. Halide-free flux qualification ROL0 according to ANSI/J-STD-004.
2. “No clean” solder paste is recommended.
3. Offers a high tack force to resist component movement during high speed.
4. Solder paste with fine particles: powder particle size is 20-38 µm.

3.3 Placement

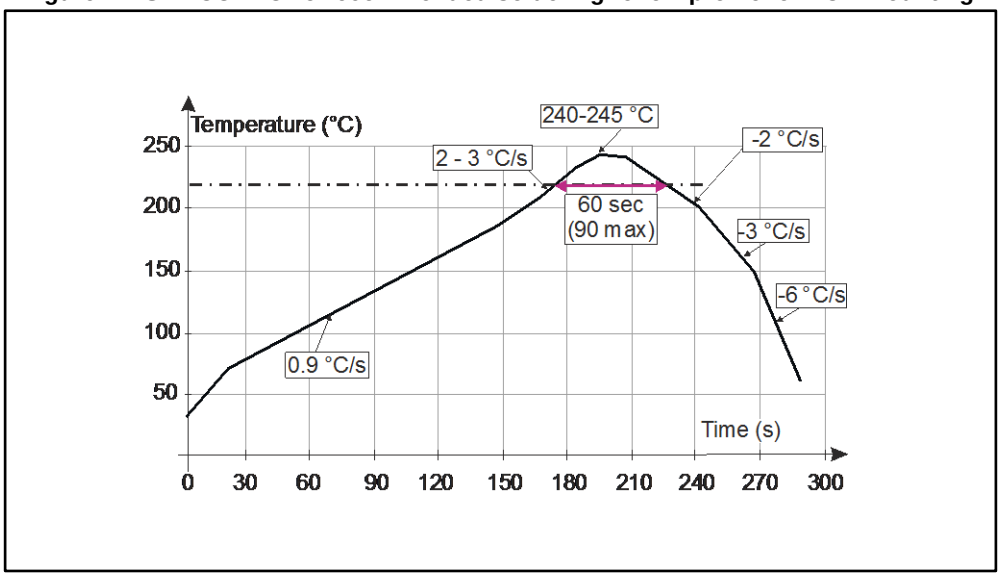
1. Manual positioning is not recommended.
2. It is recommended to use the lead recognition capabilities of the placement system, not the outline centering
3. Standard tolerance of ±0.05 mm is recommended.
4. 3.5 N placement force is recommended. Too much placement force can lead to squeezed out solder paste and cause solder joints to short. Too low placement force can lead to insufficient contact between package and solder paste that could cause open solder joints or badly centered packages.
5. To improve the package placement accuracy, a bottom side optical control should be performed with a high resolution tool.
6. For assembly, a perfect supporting of the PCB (all the more on flexible PCB) is recommended during solder paste printing, pick and place and reflow soldering by using optimized tools.

3.4 PCB design preference

1. To control the solder paste amount, the closed via is recommended instead of open vias.
2. The position of tracks and open vias in the solder area should be well balanced. A symmetrical layout is recommended, to avoid any tilt phenomena caused by asymmetrical solder paste due to solder flow away.

3.5 Reflow profile

Figure 17: ST ECOPACK® recommended soldering reflow profile for PCB mounting



Minimize air convection currents in the reflow oven to avoid component movement.

Maximum soldering profile corresponds to the latest IPC/JEDEC J-STD-020.

4 Ordering information

Figure 18: Ordering information scheme

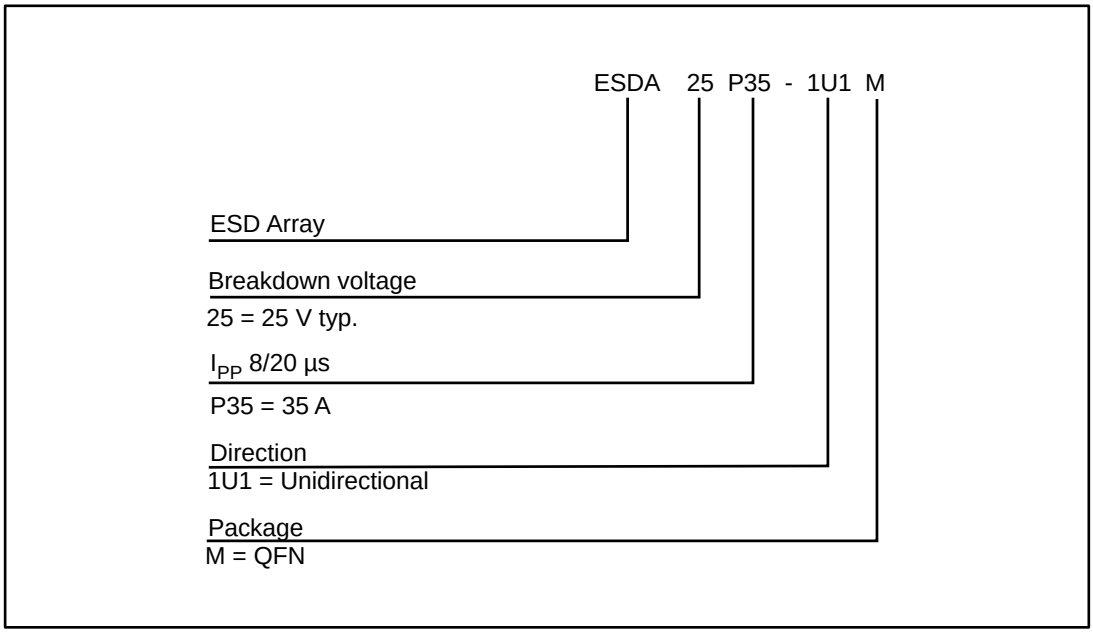


Table 4: Ordering information

Order code	Marking[(1)]	Package	Weight	Base qty.	Delivery mode
ESDA25P35-1U1M	P	QFN 1610	2.4 mg	8000	Tape and reel

Notes:

(1)The marking can be rotated by multiples of 90° to differentiate assembly location
